UPGRADE

© Zytek Fire - 2023 | [zyteqfire.com](http://zyteqfire.com)

ZYTEQ Fire is pleased to announce the release of version 1.4.0 Firmware and Chameleon Connector configuration software. This upgrade contains a number of additional features that will greatly improve cause and effect programming particularly with large systems.

New features include:

- 19,000 I/O devices (including the ZA831) can now be triggered from a second stage alarm providing almost unlimited options for staged evacuation.
- Ability to now provide unique names to I/O Groups.
- Option to keep call points active in disabled zones.
- Optional automatic fault reset after restoration of mains supply.
- Optional disable or enable of pre-alarm's.

In order to unlock these features all panels on the network will have to be upgraded to the V1.4.0 firmware and configured using the V1.4.0 Chameleon Connector software. Please contact Technical Support at [support@zyteqfire.com](mailto:support@zyteqfire.com) for more information.
